

Biofuels...

the Best way to see the future is...

To Create It

IndianOil Corporation and PetroAlgae

Biodiesel from Algae

Future fuels will be sourced from unconventional feed stocks. Alga is projected as one such feedstock in the next decade and beyond. IndianOil has entered into a strategic partnership with US based PetroAlgae to license micro-crop technology for the large-scale production of renewable fuels.

Signing of MOU between IndianOil and PetroAlgae

IndianOil's Biotechnology group has already made significant strides in harnessing this potential technology. This partnership will accelerate commercialization of technology for Indian conditions through a series of trials and pilots during the next twelve months.

Creating a New Future

Creating a new chapter of energy production and usage will engage various facets of economic and social sectors: technology, agriculture, land, environment—to name a few. The institutes and corporate working in different segments of the value chain need a platform for integration. IndianOil envisions to be the catalyst for fostering partnership culture as well as a user for such concepts, products and services.
